

## Prescription Mobile Checkout

Driving optimal efficiency at the pharmacy counter

Patients expect the same level of convenience in paying for their scripts as they have for other bills. Our Prescription Mobile Checkout allows patients to see the cost of, and pay for, their prescriptions ahead of time, thereby streamlining the pick-up process once they arrive at the pharmacy counter. Before they ever walk into the pharmacy, patients can now see the price of their prescriptions on their mobile device and pay for these prescriptions.

### Feature Spotlight: Co-pay Amount Display

Whenever a patient has a prescription that has been filled and is ready to be picked up at the pharmacy, mscripts will retrieve this information and generate a notification to the patient that includes the price or co-pay. Patients can see the payment amount in a prescription pickup reminder, or by accessing the mobile app or web platforms.

# Feature Spotlight: Mobile Checkout

Patients begin by viewing their 'Prescription List,' which displays a patient's prescriptions. For prescriptions that are ready to be picked up, patients can add the ones they wish to pay for to their shopping cart. After answering any required pre-screening questions, the patient can use a credit card on file at their pharmacy or add a new credit card to pay for their scripts. The card will not be charged until the patient picks up the prescriptions.

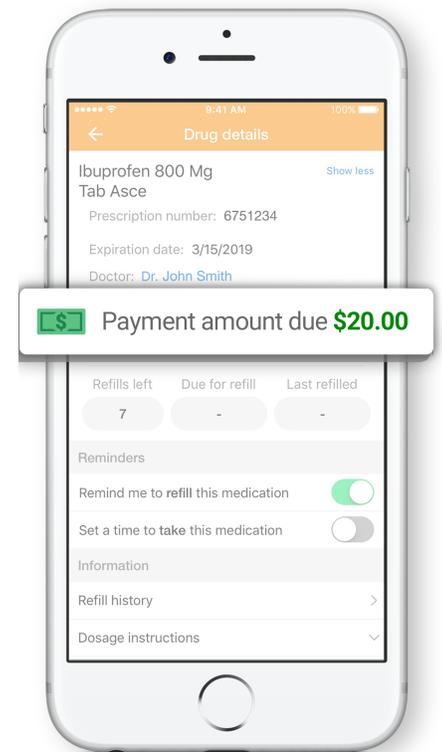

By answering questions and processing payment in advance, both the patient and pharmacy staff save valuable time once the patient arrives at the pharmacy to pick up their prescriptions.

## Did you Know?

*The mscripts platform exhibits parity across all channels? For example, if a patient responds to a text and requests a refill, that response is mirrored across the app and web platforms in real-time.*

## Benefits of Prescription Mobile Checkout

- ✓ Increased customer satisfaction and loyalty
- ✓ Increased speed to checkout
- ✓ Shorter lines
- ✓ Reduction in work for pharmacy personnel
- ✓ Enhanced incentive for patients to download the pharmacy app

## Availability

Prescription Mobile Checkout is available as an add-on module to the base platform starting in the summer of 2018 for PDX's EPS pharmacies on mscripts Version 7.2 and above.
